All vehicles include metallic paint unless otherwise stated.

¹ Figures shown are for comparability purposes; only compare fuel consumption and CO₂ figures with other vehicles tested to the same technical procedures. These figures may not reflect real life driving results, which will depend upon a number of factors including the accessories fitted (post-registration), variations in weather, driving styles and vehicle load. Data correct at 1.7.2020. Figures quoted are for a range of configurations (including non-UK) and are subject to change due to ongoing approvals/changes. For more information, please see www.volkswagen.co.uk/need-help/wltp or consult your authorised Volkswagen retailer.

‡ These vehicles are WLTP (Worldwide Harmonised Light-Duty Vehicles Test Procedure) type approved vehicles. More information is available at www.volkswagen.co.uk/need-help/wltp. S/S refers to Start/Stop function.

† Please note these models may no longer be available to order, or only available from stock and not available to factory order.

SCR (Selective Catalytic Reduction) requires AdBlue[®], please see page 28 or visit www.volkswagen.co.uk/technology/adblue for more details.

Your Volkswagen car is fitted with an advanced emissions control system, which helps your vehicle meet EURO 6 exhaust gas regulations.

How does the system work?

AdBlue®, a water/urea based additive, is stored in a tank (like diesel fuel), however, unlike fuel it is not injected into the engine, but directly into a specially modified part of the vehicle's exhaust. This begins a chemical reaction which removes the polluting oxides of nitrogen (NOx), converting them into harmless oxygen and nitrogen in a process known as Selective Catalytic Reduction, or SCR for short. SCR is only applicable to diesel engines and the more economically you drive, typically, the less AdBlue® you will use.

The size of the AdBlue® tank fitted to your car will vary depending on which Volkswagen model you have, therefore the interval between top-ups will vary. In addition, many factors such as mileage, journey type, driving style and environmental conditions can influence how much AdBlue® is consumed. A passenger car can consume approximately 1.5 litres of AdBlue® every 620 miles (1.0–1.5 litres for the Passat and Passat Estate). The chart below details the AdBlue® tank size and location.

Model (SCR derivatives only)	Tank size (Approximately)	AdBlue® tank filler location	Initial warning of low AdBlue® (2,400km/1,500 miles to go) can be expected to occur at:
Passat and Passat Estate	13 litres	Next to fuel filler nozzle	4,000 to 6,500 miles or sooner*
Tiguan	18 litres	Next to fuel filler nozzle	3,000 to 4,000 miles or sooner*
Tiguan Allspace	13 litres	Next to fuel filler nozzle	3,000 to 4,000 miles or sooner*
Touran	11 litres	Next to fuel filler nozzle	3,000 to 4,000 miles or sooner*
Sharan	16 litres	Left-hand side of luggage compartment	5,000 to 6,000 miles or sooner*

* Distances are approximate and the warning light may come on sooner depending on driving style, journey type, engine and vehicle load and environmental conditions.

How will I know if the system needs topping-up?

A series of warnings will be given via the driver information system, accompanied by advice/messages.

The first message is displayed when the remaining range is approximately 1,500 miles, and is repeated every 62 miles until the range reaches 1,000 miles, at which point the warning turns amber. This warning is repeated every 31 miles and is accompanied by an audible tone. If these warnings are not acted upon, the warning turns red; once this happens the car will not restart once the ignition is turned off. This is not a fault, but a required feature of the system. If this stage is reached the system will need a full top-up before the car can be restarted. Further information is available in the vehicle handbook.

Why should I use a Volkswagen Authorised repairer for top-ups?

- AdBlue® top-ups at authorised repairers are extremely competitive and charged by the litre, so you only pay for what you need
- Authorised repairer staff are trained to handle AdBlue®
- AdBlue® tanks need special adaptors on fillers to ensure there are no spillages
- Volkswagen do not recommend keeping top-up bottles in cars

The top-up bottles supplied by Volkswagen have a capacity of 1.89 litres, and come complete with the adaptor nozzles that fit the Volkswagen AdBlue® tank. These are available from all Volkswagen Authorised repairers.

Important information

- AdBlue® is not a fuel additive. This is why there is a separate AdBlue® tank
- If you put AdBlue® in your fuel tank by mistake, please do not start the engine, but contact a retailer for help
- Put only AdBlue® in the AdBlue® tank; do not fill the AdBlue® tank with any other liquids
- Prevent anything from contaminating AdBlue®
- If small quantities of AdBlue® come into contact with the vehicle's paintwork, for example, wipe them off and if necessary rinse the area with water

AdBlue® warning lights.
